

**NOTICE OF FINALIZATION
OF THE REVISED REMEDIAL ACTION PLAN
AND THE NEGATIVE DECLARATION FOR THE
FORMER GOLDEN EAGLE REFINERY SITE
CARSON, CALIFORNIA**

The State of California Department of Toxic Substances Control (DTSC) announces the finalization of the Revised Remedial Action Plan (RAP) and the Negative Declaration for the former Golden Eagle Refinery site, located at 21000 South Figueroa Street in the City of Carson. An open house and public meeting were held on September 14, 2000 to receive public comments and discuss the draft Revised RAP.

The Revised RAP presents the new Monitored Natural Attenuation (MoNA) program that will be used to complete the cleanup of residual groundwater contamination at the site. Subsurface conditions will be monitored regularly throughout the MoNA program to gauge the program's effectiveness and assure that groundwater remedial goals are achieved. The original RAP, approved in 1994, resulted in the attainment of remedial goals for groundwater across most of the site. However, the existing groundwater remediation system is not as effective at the low levels of residual groundwater contaminants currently found at the site. Consequently, a new groundwater remediation program was developed to address the residual groundwater contamination. All remedial activities at the site will be conducted under the oversight of DTSC.

DTSC encourages the exchange of information with interested and concerned citizens. The Revised RAP and other site-related documents are available for public review at either of the two Information Repositories established for the site. The Information Repositories are located at:

Carson Public Library
Reference Section
